

For Monitor and Wizard Stations

The anemometer includes both wind speed and wind direction sensors. Rugged components stand up to hurricane-force winds, yet are sensitive to a light breeze. Includes sealed stainless-steel bearings for long life. The range and accuracy specifications have been verified in wind-tunnel tests. Digital filtering, with time constant as specified below, is applied to wind direction measurements.

General

Sensor Type

Wind Speed Solid state magnetic sensor
Wind Direction Wind vane and potentiometer

Attached Cable Length 40' (12 m)

Note: Cable lengths longer than 140' (42 m) between sensors and console may artificially limit wind speed readings. That is, beyond that length, maximum recordable wind speed decreases as cable length increases. For example, with a length of 140' (42 m), the maximum recordable speed exceeds 175 mph. At 240' (72 m), however, the maximum recordable speed drops to less than 140 mph. Below that upper limit, however, the anemometer's accuracy is not affected.

Cable Type 4-conductor, 26 AWG
Connector Modular connector (RJ-11)
Recommended Maximum Cable Length 140' (42 m) Sensor to Console
